Ilana Krumm  
Senior Resident  
Internal Medicine Residency Program

Dear Ilana,

As block chair for MedSci 530A Circulatory Systems, the core medical student course in cardiovascular, pulmonary and renal physiology and pathophysiology, I would like to take this opportunity to recognize your amazing work as a small group leader in the course again this year.

We obtain evaluations from the students in each of the small groups each year. Attached to this letter, you will find a copy of your evaluations including the numerical scores and written comments. You received a rating of 5.8 on a scale of 0 to 6 on the dimension of "Effectiveness with Subject Matter," 5.8 on a scale of 0 to 6 on the dimension of the students' confidence in your knowledge and 5.9 on a scale of 0 to 6 on the dimension of instructor enthusiasm. All of these scores are well above the average score for the fellow cohort and, in fact, are nearly as high as any fellow received this year. In addition to these great numerical scores, you received a large number of extremely positive written comments from the students, far more than most small group leaders usually receive.

This is now the second year in a row that you have not only participated as faculty in the course but have also garnered extremely strong ratings for your work. Based on these evaluations as well as my own personal observations during some of the course sessions, it is clear that you have a great career ahead of you as a medical educator.

As I have stated in the past, our course generally receives positive evaluations from the students, much of which is attributable to the great work of instructors, like yourself, who are dedicated to the students' education and well-being. I am very appreciative of the time and effort you put into the course and look forward to having you back during your Chief Resident year.

**Department of Medicine  
Division of Pulmonary, Critical Care & Sleep Medicine**

Sincerely,

A handwritten signature in black ink, appearing to read 'A. Luks', with a long horizontal flourish extending to the right.

Andrew M. Luks, MD  
Block Chair, Circulatory Systems
